

JERED ROSS

[linkedin.com/in/jeredross](https://www.linkedin.com/in/jeredross) | github.com/jersross | jeredross1@gmail.com | Secret Clearance

Goal-oriented Business Analytics graduate student and IT operations professional with 2+ years of enterprise platform support experience across requirements analysis, change/incident management, data reporting, and security governance. Pursuing an MS in Business Analytics (AI/ML focus) at Purdue with active cloud, AI, and cybersecurity credentials in progress. Targeting analytics, technical BA, or security-adjacent product roles.

EDUCATION

Purdue University — Daniels School of Business

Expected December 2027

MS in Business Analytics | AI/ML Focus | Languages: Python, R, SAS, SQL

Indiana University — Luddy School of Informatics

May 2023

BS in Informatics | Business Minor

TECHNICAL SKILLS

IT Service Management: ServiceNow (SNAP), Azure DevOps, Change/Incident Management, User Account Administration, Navy ERP (SAP-based)

Business Analysis: Requirements Gathering, User Stories, UAT, Process Documentation

Analytics & Visualization: Tableau, Power BI, Pandas, Matplotlib, Jupyter Notebooks, Excel (EMV modeling)

Programming & Data: Python, SQL, R, SAS, PHP, HTML/CSS, Linux

Cloud & Big Data: AWS (S3, Glue, Athena, SageMaker), GCP (BigQuery, Dataflow) — in progress

AI & ML: Prompt Engineering, Agent-based AI, Streamlit, Hugging Face, Descriptive/Predictive Analytics

Platforms & Tools: SharePoint, Microsoft 365, Git, VS Code, Adobe XD, MySQL, MariaDB, Microsoft Windows/Unix

Frameworks: Agile/SDLC, NIST Cybersecurity Framework, CIS Controls, DevOps

Certifications: CompTIA Security+ (in progress), Google AI Essentials, Google Prompt Engineering

PROFESSIONAL EXPERIENCE

Precise Systems — Acquisition Management System (AMS) | Lexington Park, MD (Remote)

Oct 2023 – Feb 2026

Technical Application Analyst

- **Product Management and Support:** Collaborated with product owners, developers, business stakeholders, and end users to gather, analyze, and document business requirements supporting enterprise applications utilized by more than 9,000 end users.
- **Change Request Management:** Generated, coordinated, and advised on change requests across the enterprise platform, managing CR lifecycle from initiation through implementation and testing in Azure DevOps.
- **Incident Management:** Monitored support trends and system performance to identify, triage, and resolve routine incidents; escalated complex issues with structured documentation. Developed knowledge base enhancements improving troubleshooting efficiency and resolution time by 40.3%.
- **Application Enhancement Support:** Translated business needs into user stories, functional requirements, enhancement requests, and defect documentation within Azure DevOps, supporting application modernization and workflow improvements.
- **User Acceptance Testing:** Participated throughout the solution lifecycle including requirements gathering, functional documentation, testing, validation, implementation support, and UAT to ensure system enhancements functioned as intended.
- **Data Analysis & Reporting:** Leveraged SQL-based data analysis to fulfill enterprise reporting requests, data calls, and item-level updates.
- **Business Process Improvement:** Analyzed existing customer support workflows and recommended automation opportunities to eliminate manual DevOps tasks and ServiceNow tickets.
- **Cross-Functional Service Coordination:** Built trusted working relationships with product owners, developers, government stakeholders, and end users across organizational boundaries, maintaining a customer-oriented approach and strong teamwork to deliver technology solutions, supporting SharePoint-integrated workflows, SQL-based reporting, and direct troubleshooting of Navy ERP (SAP-based) incidents including PR discrepancies, document errors, and reconciliation issues.

- **Incident Response Planning:** Developed and standardized incident response documentation and reporting workflows aligned with NIST and CIS frameworks to support organizational readiness and compliance.
- **Governance & Compliance:** Contributed to IT governance documentation including policy drafts, process diagrams, and compliance reporting artifacts.
- **Security Documentation:** Analyzed security controls and prepared structured reports to identify risks and support data-driven mitigation strategies.
- **Analytical Reporting:** Created standardized workflows for IT asset reporting, improving data accuracy, consistency, and tracking processes.
- **Stakeholder Communication:** Communicated findings and actionable recommendations to both technical teams and non-technical leadership, adapting messaging to audience and driving cross-departmental buy-in on governance and process adoption.

TECHNICAL PROJECTS

Big Data Analytics in the Cloud — Healthcare Cardiovascular Risk Analysis In Progress

- Designing an end-to-end cloud-based analytics ETL / ELT pipeline on AWS using S3, Glue, Athena, and SageMaker to predict 30-day hospital cardiovascular risk from CDC cardiovascular disease dataset.
- Developing data ingestion, transformation, and feature engineering workflows with cost-control strategies, AWS vs. GCP trade-off analysis, and governance documentation including a model card and fairness considerations.
- Producing architecture diagrams, a 2,500–3,500 word technical report, and a GitHub repository with documented README — deliverables aligned to real-world ML engineering standards.

AI for Business Analytics — AI-Powered Analytical Solution July 2026

- Built an interactive customer intelligence dashboard for a retail analytics case study using Python (Pandas, Plotly, Streamlit) and Bash scripting for environment setup and Git-based version control, consolidating inconsistent categorical data and engineering KPI, filtering, and visualization layers to surface revenue drivers and at-risk customer segments; deployed via Streamlit Community Cloud with GitHub-based CI/CD.
- Leveraged prompt engineering and Python to develop an interactive Gradio analytics application, integrating data cleansing, exploratory visualization, Multiple Linear Regression, and business-focused predictive modeling to estimate Airbnb rental prices and support data-driven investment decisions.

Tableau Analytics — NYC Airbnb Market Analysis May 2026

- Conducted exploratory data analysis on NYC Airbnb listings using Tableau to evaluate pricing trends, rental availability, and profitability across boroughs.
- Designed interactive visualizations comparing average listing prices by borough, bedroom count, and room type to identify market trends and affordability patterns.
- Developed an executive-style Tableau dashboard integrating multiple visualizations and filters to enable stakeholder exploration of key performance metrics and market insights.

Production Optimization Model — EMV Analysis 2025

- Developed probabilistic optimization model in Excel to determine profit-maximizing production levels under uncertainty using Expected Monetary Value (EMV) analysis.
- Modeled overage and underage risk tradeoffs using probability-weighted revenue and cost scenarios; identified optimal production quantity (500 units each) maximizing expected profit of \$2,215 per game.
- Quantified stockout risk (40–50%) and overproduction risk to support data-driven operational decision making.

Data Analytics — Insurance Claims Analysis April 2026

- Analyzed 2,000+ insurance claims records using Python, Pandas, and NumPy; performed EDA to evaluate relationships between demographic variables, policy attributes, and claim outcomes.
- Developed Matplotlib and Jupyter Notebook visualizations communicating claim distributions, pricing patterns, and risk indicators.
- Presented findings and business recommendations to support data-driven decision making.

Information System Development — Housing Platform Aug 2022 – May 2023

- Led requirements analysis, user research, interactive prototyping (Adobe XD), ERD/database schema development, and creation of 8 Epics with 32 user stories across a two-semester SDLC project within a four-person team.
- Built role-based authentication using Google OAuth 2.0 and dynamic listing functionality using PHP, SQL, HTML/CSS, and Bootstrap with API-based data exchange.
